## 1. Introduction

TestingWhiz provides integration with Python editor to help the users to automate a broad range of web and Desktop applications.

## 2. Python Configuration

### 2.1. Pre-requisites

#### 1. Python installation

*In order to configure python editor in TestingWhiz, it is required to have Python installed in your machine*

*Note: Support for Python editor is only available for Windows machines*

- Install Python for Windows Operating System using the below link:

[Download Python Installer](#)

### 2.2. Configurations

#### 1. Python Virtual Environment

*Note: Python Scripts will be executed in python virtual environment (application will automatically install 'virtualenv' from backend if not already installed in users' machine)*

- Once installed, application will create a virtual environment 'Testingwhiz-PythonEnv' under:

{.whiz} directory → python

- The installed Python libraries will be defined under:

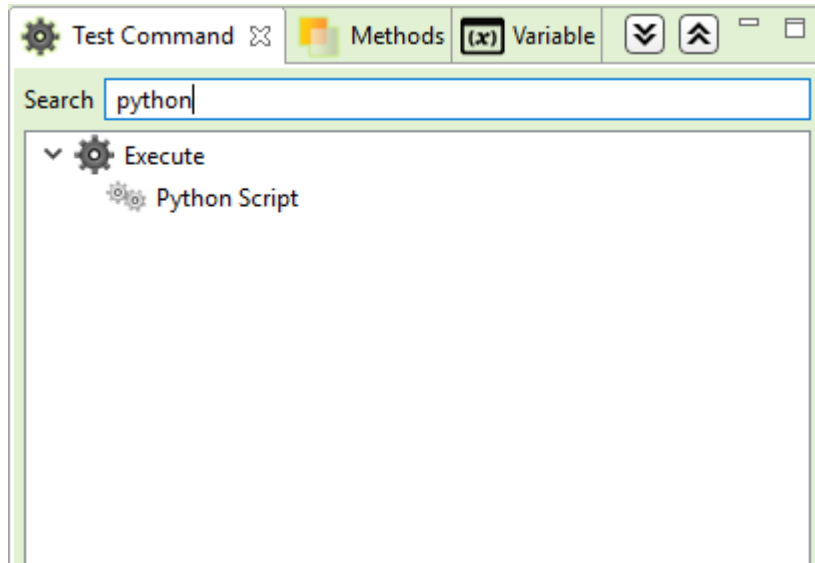

{.whiz} directory → python → python-requirements.txt

Incase user want to use new libraries, define the installed libraries under 'python-requirements.txt' and restart the application

### 2.3. Execute Python Script

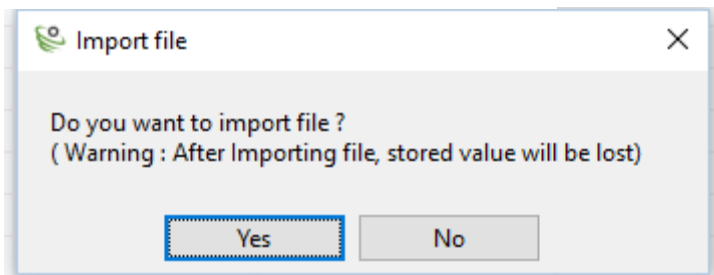

In order to execute Python script, search 'python' keyword under Test commands,

1. Double click on 'Python script' command or drag and drop the command to add/execute the python script

2. User can Import existing python script or create a new script as per the requirement and execute it as shown below.

Click 'Yes' to Import Existing Python file

OR

Click 'No' to create new python Script using Python Editor

```

Python Editor
from pywinauto import application
import time
app = application.Application()
filename="testingwhiz.txt"
app.start("Notepad.exe")
time.sleep(2)
app.UntitledNotepad.Edit.type_keys("Welcome to TestingWhiz.", with_spaces = True)
time.sleep(3)
app.UntitledNotepad.menu_select("File -> SaveAs")
app.SaveAs.edit1.set_edit_text(filename)
time.sleep(1)
app.SaveAs.Save.click()
try:
    if(app.ConfirmSaveAs.is_visible()):
        time.sleep(1)
        app["ConfirmSaveAs"]["Yes"].click()
except:
    pass
time.sleep(2)
app.UntitledNotepad.menu_select("File -> Exit")
  
```
