Release Notes Version 6.2.0

New Features

- Live dashboard and live reporting feature. No more wait till test run is totally finished.
- Added fail safe feature to prevent corruption of .twiz file.

Improvements and Enhancements

- Extended Zephyr for Jira integration with TestingWhiz. Now along with test cases, execution status on the test cycle of Zephyr tests is in sync too.
- Extended operation 'Write Message To Report' command to support color coded messages.
- Added auto-commit option configurable from UI for Database > Query operation.
- Provided support for latest Firefox and Chrome browser versions.
- Performance tuning to handle huge record size in data tables.
- Kept console view after the test run to review logs with handy options.
- Added support for variables and data table reference for Get > Table Column & Get > Row Count Commands.
- Performance tuning for large scale test projects handling.

Bug Fixes

- Execution for test cases in suite goes into NOT RUN state for specific case.
- Execution done over scheduled job takes more time than the execution done over normal execution.
- While loop steps are missing in Report for specific case.
- Screenshots are generated with black screen for loop and callmethod combination scenario.
- Write Variable To datatable - value doesn't get stored in datatable cell when there is a variable reference in it.

Browser Support

- Internet Explorer: Version 9 and higher
- Mozilla Firefox: Version 57 and higher
- Google Chrome: Version 69 and higher
- Microsoft Edge Version 40 and higher
- Headless Version 2
