

Release Notes Version 7.2.1

New Features

1. **Wait for element to get invisible:** Increased capability of wait command ensures more script stability. Also helps in managing the pop-up by minimizing the impact.
2. **Auto-healing properties:** AI-ML powered seamless regression testing process by managing the slight object changes, occurring due to version change.
3. **Develop utility to check configuration pre-requisite via TestingWhiZ:** One-stop to get complete health check of your system for an accelerated support service.
4. **Azure DevOps Integration:** Enabled plugins to support RBT (Risk Based Testing) and test object execution.
5. **Lambda Test integration for Web and Mobile:** Incorporated cloud execution system testing.
6. **Installation pre-requisite check for TestingwhiZ Installer:** Easy checklist to accelerate TestingwhiZ installation.
7. **Open/close browser command:** Open and closing of browser in between test execution is now made possible.
8. **GraphQL Support for microservices:** One-in-a-kind tool to provide GraphQL webservices testing.
9. **Detailed Report:** Complete build information in a single report.
10. **Option to move back from the method:** Provides quick and easy traversing through nested methods.
11. **Sort Command:** Allows to sort the data in a column, in any data table.

Improvements and Enhancements

- Recording Saved Path now is displayed in Console and Report logs.
- Improved Data base query builder enables query less database management.
- Sorting Facility in Data Table.
- Added Capability for Max time out limit in Saucelabs.
- Version Control for improved Logging Mechanism.
- Enhanced Test Object scheduler, allowing to choose the test case from the list in test suit or single new test suite.

Bug Fixes (Critical/High)

- Fixed issue of sync element configuration.
- Solved re-run failed test cases, no more false report generation.
- Solved mobile back issues of Saucelab.
